Safe-work

Contractor Management System

FORMERLY SAFEGUARD SYSTEMS EUROPE

# Electronic Contractor Management System

Control your projects and identify all contractors within your organisation

SG World has distilled all our experience from our successful paper based systems for managing contractors into our innovative Safe-work product. From booking a job all the way through to completion, Safe-work relieves you of the burden of controlling this time consuming process.

Using a simple interface, Safe-work manages all of your approved contractors, prints an authorisation-to-work on arrival and issues bespoke permits for those jobs which require them.

## Safe-work

Contractor Management System

## Would you like to manage your contractors better? Would you like to reduce your paper-work?

All information is stored within Safe-work which significantly reduces the amount of paper required. Safe-work allows you to report on a number of areas of contractor management including incidents, and number of incomplete jobs, amongst many others.

### How can Safe-work help you?

- > Allows customisation of permits
- > Handle contractors and jobs professionally
- > Fast and efficient product with reporting facility
- > Allows reporting of job progress
- > Enhances health & safety on site
- > Allows for reduction in paper as all records and permits are stored electronically
- > Allows access at any PC via your intranet
- > Integrates with Safe-pass visitor management software to control visitors as well as contractors
- > Record incidents and notes against jobs
- > Attach method statements to jobs
- > Includes ability to complete permits via a handheld device to allow completion at location of work
- > Can manage multiple sites
- > Can also manage the issue of PPE
- > Pre-book contractors before arrival on site
- > Can deal with multiple contractor entrances

### Technical specification.

Safe-work is written in ASP and connects to the SQL database via an ODBC connection on the network. There is an optional module to complete the permits via a handheld device. The client to pre-print authorities is written in VB.Net. You also have the optional integration of a full visitor management system to work as a single solution.

#### We supply:

- > Safe-work intranet software including client for printing authorities-to-work
- > Pre-printed permit templates
- > Pre-printed authorities-to-work
- > Helpdesk support between normal working hours 9:00am to 5:00pm Monday - Friday
- > Full training to suit your needs
- > A free upgrade on licence renewals
- > Printers and laser scanners
- > Replacement printer or laser scanner within 24 hours in event of manufacturer fault

#### You supply:

- > A company intranet
- > Computers that satisfy all technical specifications as shown
- > Administrator log on or network administrator at time of installation
- > SQL server to host the database
- > An IIS server to host the web application

#### System Requirements:

- > PC  
Pentium III PC or equivalent running Windows 98, 2000 or XP
- > Server  
Running IIS and SQL
